February 9th 2011: Guillemots, Puffins and
Bears of an Arctic Island**

Dr. George Divoky has traveled to remote Cooper Island in the Arctic for nearly 30 years. Braving the elements and the occasional polar bear, his mission is to study the Black Guillemots — seabirds closely related to the extinct Great Auk. Because no other animal is so closely tied to Arctic ice flows, George's research is contributing to the understanding of climate change on wildlife in Arctic. Climate change is the reason for more puffins and polar bears on Cooper Island. George explains why this is bad for guillemots. He concludes on a hopeful note on how pelican boxes built for nesting si
