December 11th 2014: The Biggest Threat to HealthCare

The Ebola media storm that hit US shores this fall fortunately outweighed its actual impact. While the virus remains extremely deadly in Sub-Saharan Africa, only two patients are known to have acquired the disease on United States soil, both in the treatment of an Ebola patient in a Dallas hospital. Conversely, the media rarely covers a class of disease that on an annual basis kills almost 100,000 Americans, infects millions more and costs over \$30 billion. Healthcare Associated Infections (HAI's) such as MRSA and C. diff, are infections that approximately 1 out of every 20 patients acquire
